Interesting with a nice twist ending.. The graphics and soundtrack were great. The story telling however is all over the place with

a very random ending that had nothing to do with the events prior to it. I still don't really understand the story. The game has quite a few annoying but not game breaking bugs as well. For the price though I still recommend it.. Great graphics, great intriguing story until the end, the game runs smoothly and interacting with objects is very easy. Length of this game i'd say is about 2 hours really stretching it out. I had a bug where if I tabbed out of the game and back in, I could no longer interact with objects and therefore had to restart leading to save issues as the game only saves during certain check points, which was annoying. The ending is absolute dog Most people will see the end take shape about halfway or three quarters through exploring the home. The ending begins just as you might expect and you are absolutely FULL OF QUESTIONS!!!! The excitement and possibilities had my heart racing only for you to walk through one door and watch a cutscene on one of the walls of the next room play. This scene's narrative can be boiled down to "cuz you thats why" Then the credits roll. At no point do we see any real conclusion of the characters development nor we do we get any information on who the third party is calling us from within the home. I think I bought this for less than \$10 IIRC, I'd say it's barely worth that. I cannot in good faith recommend this game unless you are just looking for a walking simulator to scratch the itch because you've played most of the good ones.. Explore your home while rediscovering the truth about a past relationship. It's part "living journal" and part sci-fi. Very immersive. I look forward to seeing more from this developer.. Elena is an adventure title that tells the story of the lady who's searching for his missing husband. It is a title that is compatible with the HTC Vive VR headset, but can also be played without one. Elena features minimal gameplay, and the story is illustrated through dialogues, the environments and in textual form. There is literally no action in this game as well. Player will be exploring the house to search for clues to learn where his missing husband is, and connecting the clues to learn what has really happened, as things are not as simple as she has originally thought. This game last between 45 minutes to under 2 hours, and thus it is a pretty short game, so player may want to adjust their expectation. There are some minor glitches in VR mode, so hopefully the dev will go to fix them. While most items can be picked up, they can't really be interacted in anyway.. An Ikea browsing simulation with unnerving chick flick overtones featuring a voice cameo by George Takei. Elena is an adventure title that tells the story of the lady who's searching for his missing husband. It is a title that is compatible with the HTC Vive VR headset, but can also be played without one.
